

As a student:

Must include: ("Bank", where they put money to be taken)

1) Progress

2) Previous sessions (where live sessions are stored)

3) Online library: (where notes are stored) and hws are assigned

4) Chat room (to message tutors)

5) Profile (where they put details about themselves and what they want so our machine learning can get them a good tutor.

6) Book a session

here they get to see all tutors but

our machine learning will put them in order of "most useful to student" to "least useful"

and the Student can then access a calendar and book a session with the tutor. They can also chat with the tutor on the chatroom for more questions before they start.

7) Begin session: the student enters their

Also after the session they can rate the tutor and leave a review → "room" a few minutes before the session is timed and the tutor enters too and their session starts.

Logged in as tutor (Bank, how much money they made)

1) Profile (to help machine learning, and to set their price)

## 2) Chatroom

3) Calender (here the tutor can set what days and times they can teach)

and then they can see ...  
book sessions with them.

4) Students: here they can see the profiles of the students that have sessions with the tutors and when they click on a profile they can see the recorded sessions and the saved session notes and they can upload notes of homework and they can click "chat" and obviously chat with the student in the chatroom

5) Begin session: same as for student  
Also after the session they can rate the student and leave a review.
