About Us

An innovative online tutoring software that will transform your tutoring company into a virtual masterpiece. Using online classrooms, machine learning , data analytics , and real-time collaboration you can run your entire tutoring company from anywhere in the world while keeping track on everything that is happening under your virtual roof!

As a tutoring company you can view all the information you need such as personal details about your tutors, ratings of your tutors, and income.

As a tutor they can personalize their profile to fit their schedule, and their method of teaching. Furthermore, they can view all their students, assign homework, access all their previously recorded sessions , view their calendar for future sessions, see what students think of them, the ability to rate and leave feedback after every session, and an easy to use chatroom to communicate with their students and their parents.

As a student they can personalize their profile to fit their subjects and their method of learning. Using machine learning and data analytics our software will then show the students all the available tutors for their subjects and rank them from "Most Useful" to "Least Useful" depending on the student and their method of learning. The student can then access the tutor's calendar to book sessions. Furthermore, the student can access all their previously recorded sessions, all their session notes, their assigned homework, a chatroom to communicate with their tutors and the ability to rate and leave feedback after every session.

For sessions, our software can be used on its own as an online tutoring program where students and tutors can have sessions using our whiteboard that has the ability to accommodate one to one sessions or even a classroom of up to 3 students with an integrated video call system to maximize productivity.

If a tutoring company prefers to stay old-fashioned and have face-to-face sessions instead of online sessions. Our software is still an amazing addition to the company as it provides the ability for a company to track all their tutors, students and their progress and profit. Additionally, it also provides a full booking system that is fully automated.
